

AppScore™ reduces application migration planning time by **50%**

### RAPID MIGRATION PLANNING

AppScore™ from FutureProof is the fastest way to plan enterprise application migrations. AppScore™ enables you to rapidly assess, categorise, and plan whilst reducing the risk and complexity of your transformation programme.

By combining application information with traditional infrastructure and server discovery data, AppScore™ uniquely enables you to conduct application-centric transformation to new platforms.

### DATA INGEST

Ingest data from multiple sources via a data integration layer. Import data from tools such as software asset management, infrastructure discovery and management, CMDBs and through integration with AWS ADS or Microsoft MAP Toolkit.

- ✔ Applications profiled, scored and ranked based on your specific transformation scenarios.
- ✔ Requires no agents.
- ✔ Data ingest from any source including discovery tools and CMDBs.
- ✔ Advanced analytics visualisations providing deep-level interactive reporting.
- ✔ Provides an accurate baselined dataset for use throughout the transformation programme.

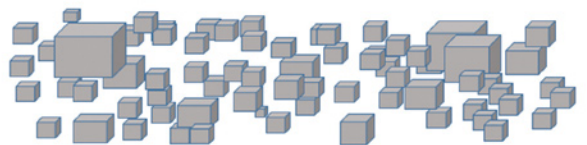

### PROPRIETARY ALGORITHM

Our purpose-built algorithm assesses over 50 data points per application to calculate scores for risk, complexity and business benefit. From this a simple to understand comparison metric - the “AppScore” - is produced.

### ADVANCED ANALYTICS AND VISUALISATIONS

Using advanced analytics visualisation tools we present the results via an interactive user interface allowing you to drill into the data, identify quick wins, and experiment with “what-ifs”.

#### 1 DISCOVER

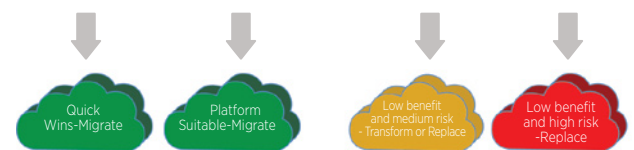

#### 2 ASSESS AND CATEGORISE

#### 3 GROUP AND PLAN

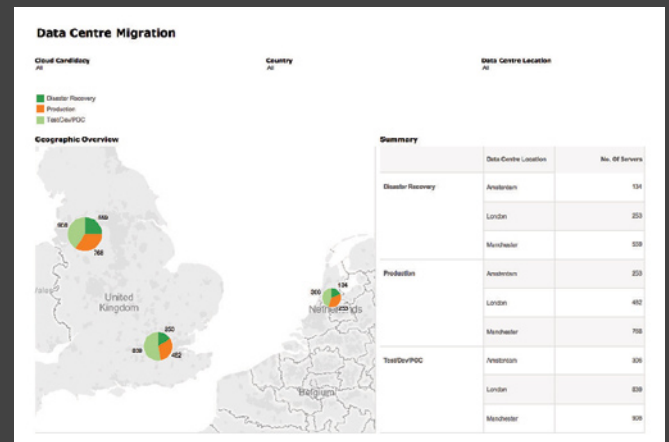

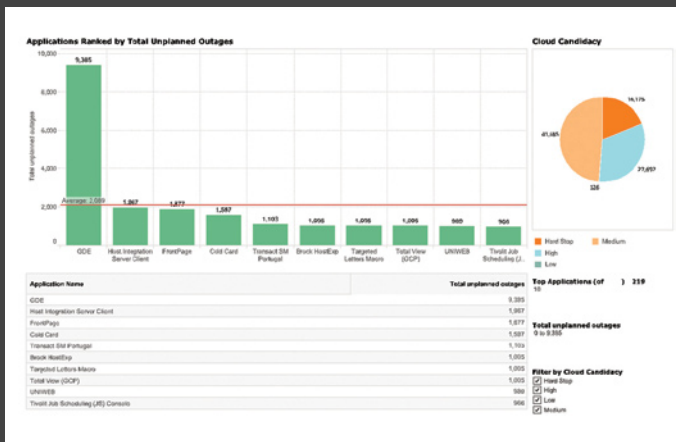

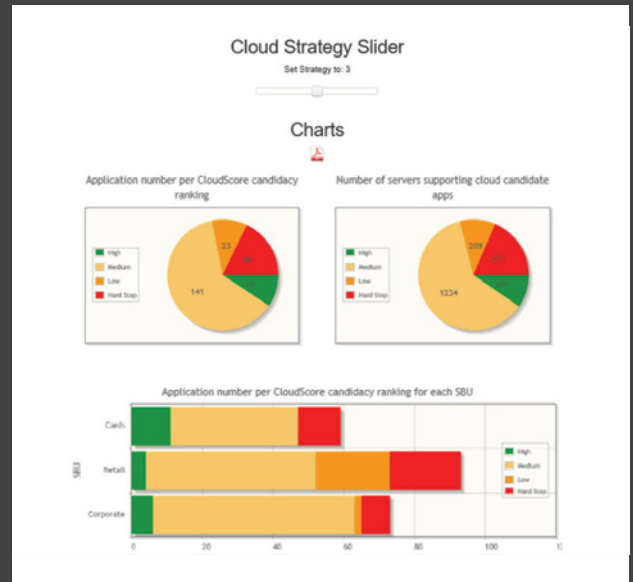

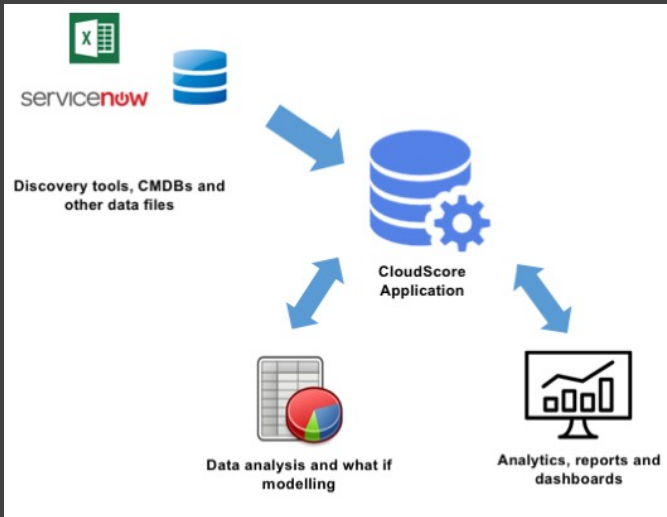

#### 4 TRANSFORM AND MIGRATE

#### DESIGNED FOR:

- ▶ CIOs and their teams who manage application portfolios.
- ▶ Application owners managing strategic roadmaps.
- ▶ Transformation specialists planning complex migrations.

# ROBUST AND PROVEN WORKFLOW:

## APPSCORE ENABLES YOU TO:

- ✓ Understand each application's scenario candidacy, revealing the benefits of migration, and the associated risk and complexity.
- ✓ Build a fully-costed business case.
- ✓ Create a prioritised migration path and adoption plan.
- ✓ Reduce risk and cost.
